

LAXIT RANA

AI & Backend Engineer — Python · LLM Agents · Java
Bangalore, India · +91-8284805624 · laxit.rana.dev@gmail.com · [linkedin.com/in/laxitrana](https://www.linkedin.com/in/laxitrana)

SUMMARY

Backend engineer with 3 years building production systems in Python and Java. Architected a **stateful, multi-tenant workflow platform** for an enterprise HRMS — durable checkpointing, tenant-scoped persistence, authorization boundaries and streaming execution, with LLM agents as the workload.

SKILLS

Languages: Python, Java, SQL
AI & LLM Systems: LangGraph, LangChain, tool calling and function calling, structured outputs with Pydantic, Model Context Protocol (MCP), human-in-the-loop workflows, agent orchestration, context engineering, Server-Sent Events streaming, OpenAI Whisper
Backend: FastAPI, Spring Boot, REST APIs, Spring Data JPA, Spring Retry, Flyway
Data & Infrastructure: MySQL, Amazon DynamoDB, Redis, Docker, Docker Compose
Testing & Observability: JUnit 5, Mockito, Locust, Micrometer, Prometheus, Grafana, Loki, OpenTelemetry

EXPERIENCE

Repute Network Pvt. Ltd. — Bangalore Jan 2024 – Present
Software Engineer

AI Assistant Platform for an Enterprise HRMS Nov 2025 – Present

- **Architected and independently built** a production LLM agent platform on **FastAPI** and **LangGraph** — natural-language HR, payroll and leave workflows for separate admin and employee audiences, each served by its own **tool registry**, with execution streamed to the client over **Server-Sent Events**
- Engineered an **interrupt-driven human-in-the-loop** workflow that suspends execution on an ambiguous employee match, surfaces ranked candidates, and deterministically resumes the original thread — backed by **pluggable durable checkpoints** (in-memory or DynamoDB with TTL)
- Enforced **multi-tenant isolation** end to end — tenant identity flows from the caller's token through request context into structured logs and into **composite DynamoDB partition keys** (HRMS, company, employee), so one company's cached data cannot collide with another's
- Designed **defence-in-depth authorization** across the entire tool surface — every tool validates caller identity against the target record before execution, so a request can only ever reach the requester's own data

Verification & Data Ingestion Platforms Jul 2023 – Nov 2025

- Re-architected a payments partner's authentication from web credentials to **mobile OTP**, raising end-to-end verification completion from **27% to 80%**
- Delivered **20+ third-party and government integrations** — **EPFO, ESIC**, payroll and HRMS platforms, and UPI payment providers; raised a delivery partner's driver-verification success from **60% to 85%**
- Onboarded **1,500+ sellers daily** (~50% of seller traffic) through a **Spring Boot** integration with a leading UPI business-payments provider
- Replaced scattered per-controller error handling with a centralised Spring **@ControllerAdvice** and a typed exception hierarchy; added **exponential-backoff retry** with typed recovery against flaky upstream APIs

Repute Network Pvt. Ltd. — Bangalore Jul 2023 – Jan 2024
Software Developer Intern

- Automated payroll-portal login and data-extraction flows with **Selenium**; built a reusable data-normalisation utility that cut invalid fields by **90%** before client delivery

PROJECTS

PerformanceLab — Spring Boot Performance & Observability Lab 2026

- Built a layered test strategy across the full pyramid — persistence slices with **@DataJpaTest**, mocked service units with **Mockito**, and API contract tests with **@WebMvcTest**
- Evolved the relational model through **11 versioned Flyway migrations** — promoting a join table to a first-class entity, adding soft deletes and audit columns, and introducing a targeted index; added **cache-aside Redis caching** with TTL and poisoned-key eviction
- Instrumented the service with **Micrometer** and **OpenTelemetry** — metrics to **Prometheus**, structured logs to **Loki**, surfaced in **Grafana** and orchestrated with **Docker Compose**

EDUCATION

Scaler — Data Structures, Algorithms & Backend Development 2022 – 2023
Diploma in Artificial Intelligence & Machine Learning — University of Hyderabad 2021 – 2022
B.Tech, Computer Science & Engineering — Jaypee University of Information Technology 2016 – 2020
