

# LAXIT RANA

Backend Software Engineer — Java · Distributed Systems · AI Agents

Bangalore · +91-8284805624 · [laxit.rana.dev@gmail.com](mailto:laxit.rana.dev@gmail.com) · [linkedin.com/in/laxitrana](https://linkedin.com/in/laxitrana)

## SKILLS

---

**Languages:** Java, Python, SQL

**Backend:** Spring Boot, MVC architecture, REST APIs, Microservices, FastAPI

**AI Systems:** LangGraph, LangSmith, MCP, RAG, LLM tool-calling, agent orchestration, context engineering, human-in-the-loop workflows, conversational AI

**Databases & Storage:** MySQL, DynamoDB, S3, Redis

## EXPERIENCE

---

### Repute Network Pvt. Ltd. — Bangalore

Jan 2024 – Present

#### Software Engineer

##### AI Assistant Platform for an enterprise HRMS

Nov 2025 – Present

- Architected and shipped the backend of a production **multi-agent AI platform** — resolving **HR, payroll, and leave** queries in natural language on **FastAPI** and **LangGraph**, routing each request to a **permission-scoped agent** with its own tool registry so users access only what their role allows
- Engineered **stateful, resumable conversations** with **DynamoDB checkpointing** (per-thread isolation) over a **multi-tenant** HRMS → company → employee data model, and shielded the assistant from **flaky upstream HRMS APIs** with a **TTL-based Redis cache**
- Built an **interrupt-driven human-in-the-loop** flow for ambiguous entity resolution — pausing execution to surface **fuzzy-ranked** candidates, resuming the same checkpointed session on selection, and **speculatively prefetching** the chosen records to mask latency
- Streamed live agent **progress and output as structured NDJSON** over a long-lived, **JWT-secured HTTP** session
- Extending the platform into a **workflow-prediction system** — reconstructing each hire's onboarding journey from events scattered across the company's existing tools (**HRMS, Google Workspace, payroll, IT**) via **cross-system identity resolution**, as the foundation for **next-activity prediction**

##### Verification & Data Ingestion Platform

2024 – 2025

- Built an extraction pipeline, raising daily throughput **25K → 300K (12×)** by switching from Selenium to a **direct-HTTP design**, with **worker-pool concurrency**, connection pooling, and **Redis-based per-record locking** to eliminate duplicate processing across instances
- Re-architected a payments partner's authentication from web credentials to **mobile-OTP**, raising verification completion **27% → 80%**
- Onboarded **1,500+ sellers daily (~50% of seller traffic)** through a **Spring Boot** integration with a leading UPI business-payments provider
- Integrated government sources (**EPFO, ESIC**) and major payroll/HRMS platforms for real-time employment & income verification; raised a delivery partner's driver-verification success **60% → 85%**

### Repute Network Pvt. Ltd. — Bangalore

Jul 2023 – Jan 2024

#### Software Developer Intern

- Automated payroll-portal login and data-extraction flows using **Selenium**; built scraping pipelines consolidating user profile data from third-party payroll platforms
- Designed a reusable data-normalization utility that cut invalid data fields by **90%** before client delivery

## EDUCATION

---

Diploma in Artificial Intelligence & Machine Learning — University of Hyderabad

2021 – 2022

B.Tech, Computer Science & Engineering — Jaypee University of Information Technology

2016 – 2020

## CERTIFICATIONS

---

Scaler — Data Structures, Algorithms & Backend Development (2023)
